

NetWitness Platform

Defense Accelerated

NetWitness® Platform delivers the most complete toolset for threat detection, investigation, response, and forensics. Featuring unmatched visibility, deep analytics, and robust response actions, NetWitness supports the requirements of the most security-conscious organizations around the globe.

Use Case	Customer Issues	How Does NetWitness Address Issues?
Threat Detection and Response	Detecting attacks and exploits that evade perimeter defenses	<ul style="list-style-type: none"> Obtain visibility into an organization’s IT infrastructure, across cloud, on-premises, and hybrid architectures Apply advanced analytics and threat intelligence to identify indicators of compromise (IoCs) that warrant investigation Provide advanced tooling to analyze and investigate anomalies, and remediate them
Incident Forensics	Reveal the full scope of an attack	<ul style="list-style-type: none"> Correlate events that comprise an attack, wherever they happen across an organization’s IT infrastructure “Replay” the attack through network packets to understand the process used by the attackers Create a report for Board and Regulatory staffs to document the attack and prevent future ones
User Entity and Behavior Analytics (UEBA)	Detecting anomalous or risky behaviors	<ul style="list-style-type: none"> Create a baseline for “normal” activity by people and IT systems Flag behaviors that deviate from the normal ones and adjust baseline as normal behaviors evolve Create reports for compliance and documentation

Visibility

NetWitness Platform delivers unrivaled visibility into your organization’s data, wherever it resides – SaaS and cloud applications, on-premises, or hybrid deployments.

Insight

NetWitness applies advanced analytics and threat intelligence to detect and correlate attacks so you can stop them before they damage your operations and reputation.

Action

NetWitness makes detections actionable with tools that block processes, isolate infected applications and endpoints, and re-image hardware.

360° of Cybersecurity

FirstWatch Threat Research & Intelligence

NetWitness FirstWatch is a premier Threat Research and Intelligence Organization committed to providing high-quality, customized intelligence work products. This global team diligently addresses the unique security needs of NetWitness customers, offering insights into a broad spectrum of adversarial activities, including Nation-State and Nation-State Proxy actors, sophisticated Cybercriminal/eCrime groups, and agenda or philosophically-driven entities. A vigilant eye on unclassified and emerging threat actors ensures that NetWitness intelligence leads in the delivery effective cybersecurity.

Incident Response

The NetWitness Incident Response Team is a group of seasoned cybersecurity professionals who provide on-demand services to help organizations deal with cyberattacks. The team has extensive experience in handling complex and sophisticated incidents across various industries and regions. They use the NetWitness Platform and other technologies to help clients quickly identify, analyze, and contain threats. The NetWitness IR Team offers Planning, Retainer, and Response services as well as proactive engagements for helping organizations identify cyber threats.

Professional Services

NetWitness Professional Services (NWPS) provides a premium enablement service that helps optimize your strategic security program. With decades of experience in delivering high-quality security solutions, NWPS can help you expedite the operationalization of your NetWitness platform, applying deep technical knowledge and expertise in high performance computing, complex networking, and mass endpoint deployment. Whether you require assistance with content development, integration, training or even exercises like capture the flag using the NetWitness platform, NWPS accelerates the time to maximum performance and efficiency of your security solutions.

NWX – The Next Generation of Hardware

The NWX appliance series by NetWitness is a next-generation hardware solution designed to provide unparalleled security performance. Employing cutting-edge hardware and engineered to meet the rigorous demands of modern cybersecurity, NWX offers comprehensive threat detection, real-time analytics, and advanced response mechanisms. NWX hardware enables a unified and simplified approach to threat management and incident response. NWX provides a robust, scalable platform that empowers security teams to swiftly identify and mitigate threats, and ensure protection of critical assets.

About NetWitness

NetWitness provides comprehensive and highly scalable threat detection and response capabilities for organizations around the world. The NetWitness Platform delivers complete visibility combined with applied threat intelligence and user behavior analytics to detect, prioritize, investigate threats, and automate response. This empowers security analysts to be more efficient and stay ahead of business-impacting threats.
